

PraxFit

Virtual Cycling for everyone

PraxFit is a unique software package that can transform any training device with a rotating pedalling mechanism into a virtual cycling bike. PraxFit offers the ability to easily connect route films to existing (or new) training devices, such as cardiobikes for example. All devices equipped with pedals are suitable for PraxFit. A sensor is mounted to a pedal and the ANT+ receiver is plugged into the computer. In 3 easy steps on the touchscreen the film is put into motion; as simple as it can get. Based on the rotating speed (RPM) of the crank the film is set into motion and the user is stimulated to move through marvellous landscapes. Furthermore we offer the possibility of producing affordable customized route films or an expansion with beautiful route films.

Included:

- PraxFit software;
- Beautiful route films;
- Garmin RPM sensor and ANT+ USB stick;
- 24" or 27" touchscreen or a big TV screen;
- Mini PC;
- Mobile and high adjustable console.

Advantages:

- User is stimulated to move;
- Very easy-to-use;
- Unique concept;
- Possibility of customized route films;
- Every route is divided into 6 sub-sections, which can function as start or finish;
- Mountable to every pedalling device;
- Film is played at pedalling speed with a minimum and maximum velocity;
- Additional option of playing the film at a pre-set speed;
- Very suitable for elderly and rehabilitating people;
- Expansion possible with beautiful route films.
